ABOUT ME

Mobile Development Engineer with 5 years of experience building mobile products in international environments. Experienced in React Native, Flutter and Node.js, with a strong background in product development, legacy modernization and IoT applications. Fluent in French, English and German.

DEGREES

2021 - 2023

OPENCLASSROOMS

- Advanced Web Development (React & TypeScript)

2020 - 2021 (4-year degree)

UNIVERSITÉ DE STRASBOURG

- Full-stack Development

SKILLS

- Frontend**
React, TypeScript, JavaScript
- Mobile**
React Native, Flutter, Kotlin, Swift
- Backend**
Node.js, Express, Django
- Cloud & DevOps**
Docker, CI/CD, Azure, Firebase

LANGUAGES

- English: Professional proficiency
- French: Native
- German: Professional proficiency
- Japanese: Currently learning

PROJECTS

- VR Startup Platform** - Co-founded a VR startup and led development of a booking and social-sharing platform.
- Bakery Management System** - Developed an internal business management platform using React and Django.
- Gaming Review Platform** - Built a React and Node.js content publishing platform.

EXPERIENCE

Actimage GmbH

Mobile Development Engineer

2021 - PRESENT

Professional Networking Platform (React Native) 2021-2022

- Led the migration of a legacy Ionic mobile application to React Native for a professional networking platform targeting senior executives.
- Implemented real-time messaging, event invitation management, and networking features to enhance user engagement.
- Modernized the user experience and introduced a modular architecture to improve scalability, maintainability, and future feature development.

Industrial IoT Mobile Application (React Native, BLE/Wi-Fi, MQTT) 2023

- Designed and developed the mobile architecture for configuring and monitoring ESP32-based industrial devices.
- Implemented BLE and Wi-Fi connectivity workflows with MQTT backend integration for real-time device communication.
- Built robust tools for technicians, enabling device provisioning, monitoring, diagnostics, and troubleshooting in industrial environments.

Smart Parking Solution (Flutter) 2023-PRESENT

- Developed a cross-platform Flutter application allowing users to reserve parking spaces, manage payments, and access facilities via QR code authentication.
- Integrated real-time parking availability management and online payment processing.
- Designed and developed a React-based administration dashboard for managing users, vehicle fleets, parking operations, and incident reporting.

Legacy Application Modernization (React Native) 2022-2025

- Performed reverse engineering and technical analysis of a business-critical mobile application with more than 10 years of accumulated technical debt.
- Led the gradual migration toward modern React Native patterns and architecture, improving long-term maintainability and application stability.
- Replaced fragile legacy implementations with reusable and robust components, simplifying onboarding for new developers and accelerating future development.

Cross-Functional Contributions

- Designed, implemented, and maintained CI/CD pipelines using GitLab CI, TeamCity, and Fastlane Match.
- Introduced unit and integration testing practices on projects with limited quality assurance processes.
- Conducted code reviews, produced technical documentation, and mentored junior developers.
